'A Platform for Maryland's Future'

Fiscal Accountability

Maryland's oppressive tax burdens on our citizens have left our state with another \$2 billion budget shortfall. As your Senator I will bring a new era of fiscal responsibility and accountability to Maryland tax payers, by address the long running discrepancy between state revenue and spending. In order to compete we need to establish a business friendly environment, with lower taxes for small business and private sector investments.

Justice and Security

We must put an end to Maryland being ranked 5th as the most violent state in the country. As your Senator I will support "truth in sentencing legislation" that requires violent offenders to serve 85 % of their time. With the steady increase in illegal emigration to Maryland, we must enforce federal emigration laws in Maryland. The rise in illegal immigration has put an ever greater strain on our states limited resources, as well as public safety.

Health Care Reform

In order to have real reform in health care, we need to first bend the cost curve enough for individuals and businesses, by cutting unfunded mandates, opening up the market place to other forms of group health care coverage, and reforming medical malpractice insurance. I support the states having greater flexibility to adapt a program that fits their needs best. The best solution for Health Care reform has the local communities not the Federal government, through a public / private partnership.

Government Transparency and Accountability

Citizens need to be more engaged with their elected official, by State Government embracing new web 2.0 technologies; this new interactive technology is transforming the relationship between citizen and government. Maryland's General Assembly web-site should be in user friendly format, with easy access to how members voted in committee. I support an established standard of transparency under the freedom of information Act for all state documents, such as state budgets contracts and pending legislation for online public access.
